#### DETAILED ACTION

Page 2

# Claim Objections

1. Claim 1 is objected to because of the following informalities: "the first and second channel" in not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Appropriate correction is required.

# Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

- 3. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Tsunchara et al. (U.S. Patent No. 6307844 B1).
- With respect to claims 1 & 3, Tsunchara teaches a method for using a common channel shared by mobile stations to transmit power control signals to the mobile stations, which is

Art Unit: 2666

interpreted as the method for communicating power control information for communication channels, which comprises steps of: transmitting power control information for a first channel (e.g. block 111a in Fig. 7) within a portion of a first segment of a pilot channel (e.g. block 110a in Fig. 7, answer packets in Fig. 9) and transmitting power control information for a second channel (e.g. block 111b in Fig. 7) within a portion of a second segment of the pilot channel (e.g. block 110a in Fig. 7, answer packets in Fig. 9, see col. 7, lines 29-39), wherein the first and second segment are one of a plurality of repeating segments (e.g. Fig. 7 shows the power control information for channels in portions 111 and Fig. 9 shows answer packet).

- With respect to claim 2, Tsunchara also teaches the step of alternating between the transmission of power control information for the first channel and the transmission of power control information for the second channel (e.g. Fig. 2 shows the channel 2 is alternating transmission power control information for channels 3).
- With respect to claim 4, Tsunchara fails to explicitly teach power control information for the first channel is transmitted more than once for each transmission of power control information for the second channel. It inherently knows that the times transmit the power control information for communication channels such as the design choice to communicate between the subscribers and base station are based on the priority of the subscribers and information.

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Application/Control Number: 09/207,748

Art Unit: 2666

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 5. Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsunchara et al. (U.S. Patent No. 6307844 B1) in view of Ghosh (U.S. Patent No. 5991285).
- With respect to claims 5-8, Tsunchara discloses all the aspects of the claimed invention as set forth above but fails to teach the channels are voice, data, and video channels. Ghosh teaches a system having plurality channels for voice, data and video transmission, each channel being designated with different power transmission levels (see bridge paragraph in col. 2-3). Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to implement the controlling power for each channel types in wireless communication system to provide each channel with an appropriate amount of power needed for transmission, thereby saving power and reducing signal interference.

#### Interview

6. Applicant has called Examiner on 12/01/02 to discus the claim invention (Claim 1 and Figs. 2, 5 & 6).

## Response to Arguments

- 7. Applicant's arguments filed 10/04/02 have been fully considered but they are not persuasive.
- It's noted in the Applicant's remarks indicated, Tsunechara fails to disclose the power control information for a fist channel/second channel inserting in the portion of the first/second segment of the pilot channel. But the first and second channel are not disclose in the specification. Therefore, the same ground of rejection is applied to claims 1-4

### Conclusion

**8. THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to PHUC H TRAN whose telephone number is (703) 308-7471. The examiner can normally be reached on M-F (8-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, RAO SEEMA can be reached on (703) 308-5463. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9314 for regular communications and (703) 872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 872-9314.
